World Crop Production

WCP-12-86
December 1986

PRODUCTION HIGHLIGHTS FOR 1986/87

WHEAT: World production for 1986/87 is estimated at a record 521.7 million tons, up 8.1 million or 2 percent from last month and up 4 percent from the 1985/86 harvest. Important changes from a month ago include the following:

- o USSR Production is estimated at 87.0 million tons, up 6.0 million or 7 percent from last month and up 11 percent from last year. The increase is attributed to higher estimated yield.
- o Australia Production is estimated at 17.5 million tons, up 1.5 million or 9 percent from last month and up 9 percent from last year. Extremely favorable spring weather aided the yield prospects of the crop which was planted later than normal in much of eastern Australia.
- o Canada Production is estimated at a record 31.9 million tons, up 0.6 million or 2 percent from last month and 31 percent above last year. The increase is attributed to higher estimated yield. Crop quality, although above last year, is still expected to be below the long term average. This year's harvest was affected by heavy rains.
- o Iraq Production is estimated at 1.1 million tons, up 0.3 million or 27 percent from last month, but down 22 percent from last year's revised number. The increase in estimated wheat output is attributed to a series revision based on official Iraqi statistics.

*This issue of World Crop Production includes a production feature entitled *
*"World Rice Production Review" on page 20 and a section entitled *
*"Production Briefs" on page 17. *

- o Argentina Production is estimated at 9.2 million tons, down 0.4 million or 4 percent from last month, but up 8 percent from last year's weather-reduced crop. The decrease is attributed to a downward revision in estimated yield primarily due to heavy rains during the current harvest period.

COARSE GRAINS: World production for 1986/87 is estimated at 836.5 million tons, up 6.1 million or less than 1 percent from last month, but down 1 percent from the record 1985/86 harvest. Important changes from a month ago include the following:

- o USSR Production is estimated at 108.0 million tons, up 8.0 million or 8 percent from last month and last year. The increase is attributed to higher estimated yield.
- o India Production is estimated at 28.0 million tons, down 2.6 million or 9 percent from last month, but 7 percent above last year's revised figure. Lower yields resulted in production declines as follows: millet (-1.4 million), sorghum (-0.8 million), and corn (-0.8 million). Barley output is estimated up 0.4 million tons due to an increase in area.
- o Argentina Production is estimated at 16.8 million tons, down 0.9 million or 5 percent from last month and down 2 percent from last year. The decrease is primarily attributed to a downward revision in expected corn and sorghum plantings. Sorghum area is estimated at the lowest level since the mid-1960's with production expected to be the lowest since 1979/80.
- o Canada Production is estimated at a record 27.6 million tons, up 0.7 million or 2 percent from last month and up 11 percent from last year. The increase is attributed to an upward revision in barley, oats, and corn production.
- o EC-12 Production is estimated at 81.1 million tons, up 0.4 million or less than 1 percent from last month, but down 8 percent from last year. The increase is mostly due to an upward revision in the French corn and barley crops. French corn production is estimated at 11.0 million tons, down from last year's 12.4 million, and barley production at 9.9 million tons, down from 11.5 million.

- o Other W. Europe Production is estimated at 12.1 million tons, up 0.2 million or 1 percent from last month, but down 8 percent from last year. Barley and oats production in Finland were increased.
- o Iraq Production is estimated at 1.3 million tons, up 0.3 million or 29 percent from last month and virtually unchanged from last year. The increase in estimated barley output is attributed to a series revision based on official Iraqi statistics.

RICE (MILLED-BASIS): World production for 1986/87 is estimated at 317.7 million tons, down less than 1 percent from last month and last year's record harvest. Important changes from a month ago include the following:

- o Thailand Production is estimated at 12.1 million tons, down 0.5 million or 4 percent from last month and down 7 percent from last year. Dry weather and lower estimated area caused the decline in expected production.
- o Indonesia Production is estimated at 26.0 million tons, down 0.5 million or 2 percent from last month and also down 2 percent from last year's crop. Yields are estimated down due to lower use of agricultural chemicals and to pest problems.
- o Burma Production is estimated at 9.3 million tons, down 0.1 million or 1 percent from last month and down slightly from last year. The decline is due to lower estimated yield.
- o Japan Production is estimated at 10.6 million tons, up 0.3 million or 3 percent from last month, but virtually unchanged from the 1985/86 harvest. The increase is attributed to higher estimated yield.
- o Sri Lanka Production is estimated at 1.7 million tons, up 0.1 million or 8 percent from last month, but down marginally from last year's record crop.

OILSEEDS: World production for 1986/87 is estimated at a record 196.5 million tons, down 1.1 million or less than 1 percent from last month, but up slightly from last year. U.S. production is estimated at 61.1 million tons, down marginally from last month and down 7 percent from last year. Foreign production is estimated at a record 135.4 million tons, down 1.1 million or less than 1 percent from last month, but up 4 percent from last year.

- * Soybeans: World production for 1986/87 is estimated at a record 98.8 million tons, down 0.1 million or less than 1 percent from last month, but up 3 percent from last year. Significant changes from last month are the following:

o Argentina Production is estimated at a record 7.7 million tons, up 0.2 million or 3 percent from last month and up 5 percent from last year's record harvest. The increase is attributed to higher planted area as farmers seek to reap profits in one of the few "profitable" agricultural sectors.

o Brazil Production is estimated at 16.2 million tons, down 0.3 million or 2 percent from last month, but up 21 percent from last year's drought reduced crop. The reduction is attributed to lower estimated area. Limited soil moisture early in the season in most northern growing areas has substantially delayed the pace of plantings.

* Cottonseed: World production for 1986/87 is estimated at 27.4 million tons, down 0.7 million or 3 percent from last month and down 10 percent from last year. A significant change from last month is the following:

o China Production is estimated at 6.4 million tons, down 0.4 million or 6 percent from last month and down 10 percent from last year. The decrease in production is attributed to lower estimated area. An official statistical release indicated harvested area this season was less than previously expected.

* Peanuts: World production for 1986/87 is estimated at a record 20.6 million tons, down slightly from last month, but up 1 percent from last year.

* Sunflowerseed: World production for 1986/87 is estimated at 18.9 million tons, down 0.2 million or less than one percent from last month and down 2 percent from last year's record crop.

* Rapeseed: World production for 1986/87 is estimated at a record 20.1 million tons, up slightly from last month and up 6 percent from last year.

* Flaxseed: World production for 1986/87 is estimated at 2.7 million tons, down 0.1 million or 4 percent from last month, but up 14 percent from last year. A significant change from last month is the following:

o Argentina Production is estimated at 0.6 million tons, down 0.1 million or 15 percent from last month, but up 14 percent from last year. The reduction is attributed to lower estimated yield. Heavy rains at harvest reportedly have reduced yields in the major producing state of Entre Rios.

- * Copra: World production for 1986/87 is estimated at a record 5.3 million tons, unchanged from last month, but up 2 percent from last year.
- * Palm Kernels: World production for 1986/87 is estimated at a record 2.7 million tons, down 0.1 million or 2 percent from last month, but up 3 percent from last year.
- * Palm Oil: World production is estimated at a record 8.3 million tons, down 2 percent from last month, but up 3 percent from last year. A significant change from last month is the following:
 - o Malaysia Production is estimated at 4.8 million tons, down 0.2 million or 4 percent from last month, but up marginally from last year's output. Declining yields are expected to more than offset higher harvested area. Because of low prices, many growers have reduced or virtually eliminated the application of fertilizer. In addition, tree "fatigue" following recent high yields may negatively affect yields in the next few months.

COTTON: World production for 1986/87 is estimated at 70.4 million bales, down 1.7 million or about 2 percent below last month and down 11 percent from 1985/86. Foreign output is estimated at 60.7 million bales, down 1.6 million or 3 percent from last month and down 7 percent from a year ago. Important changes from a month ago include the following:

- o China Production is estimated at 17.2 million bales, down 1.2 million or 7 percent from last month and down 9 percent from last year. Production is revised downward based on official area statistics.
- o USSR Production is estimated at 11.2 million bales, down 0.3 million or 3 percent from last month and down 7 percent from last year. Production is revised downward due to lower estimated yield. Harvest reports indicate that procurements are down from last season.
- o United States Production is estimated at 9.8 million bales, down nearly 0.1 million or approximately 1 percent below last month and down 27 percent from last year. Production is revised downward due to lower yields in Texas.

o Mexico

Production is estimated at 675,000 bales, down 75,000 or 10 percent from last month and down 30 percent from last year. Decreased output is attributed to heavy rains during harvest in the Laguna and Delicias regions. Harvesting normally begins in September and ends the last week of November.

This report was prepared by the Foreign Production Estimates Division (FPED), FAS/USDA, Washington, D.C. 20250. Further information may be obtained by writing to the division or by calling (202) 382-8888.

This report draws on information from USDA's global network of agricultural attaches and counselors, official statistics of foreign governments, other foreign source materials, and results of office analysis. Estimates of U.S. acreage, yield, and production are from USDA's Agricultural Statistics Board, except where noted. All numbers in this report are based on unrounded data and detail may not add to totals because of rounding.

*The next issue of the World Crop Production will be released at 3 p.m. *
*eastern time on January 16, 1987. Other 1987 release dates will be *
*February 10, March 10, April 10, May 12, June 10, July 10, August 12, *
*September 11, October 9, November 10, and December 11. *

---Million 480-Pound Bales---

1/ Includes total of wheat, coarse grains, and rice (milled) shown above. Estimates of Soviet total grain production, including wheat, coarse grains, rice (rough), minor grains, and pulses are 172.6 million tons in 1984/85, 191.7 million in 1985/86, and 210.0 million forecast in 1986/87.

2/ Totals for major regions and countries and other countries include the six major oilseeds shown elsewhere in this report, while world and total foreign also include copra and palm kernels for countries shown plus other countries.

Note: Entries of '.0' indicate no reported or insignificant production.

DECEMBER 1986

FOREIGN PRODUCTION ESTIMATES DIVISION, FAS, USDA

NOTE: The table below presents a 5-year record of the differences between the December projections and the final estimates. Using world wheat production as an example, changes between the December projections and the final estimates have averaged 6.0 million tons (1.2 percent) ranging from 2.6 to 10.2 million tons. The December projection has been below the final estimate 3 times and above 2 times.

1/ The final estimate for 1981/82-1984/85 is defined as the first November estimate following the marketing year and for 1985/86 as last month's (November) estimate.

2/ May not total 5 if projection was the same as the final estimate. 3/ Includes corn, sorghum, barley, oats, rye, millet and mixed grain.

PRODUCTION BRIEFS

NIGERIA: POLICY CHANGES COULD AFFECT NEXT SEASON'S CROP

On September 29, Nigeria abolished its Cotton Board which controlled gins, took possession of cotton lint and seed, and distributed free seed to farmers. Manufacturers and cotton gin owners are now concerned that increased crushing of seed, because of favorable crushing prices, could result in inadequate supplies of seed for next year's (1987/88) cotton crop.

BRAZIL: COTTON PLANTINGS COMPLETE IN THE SOUTH

Cotton plantings for the 1986/87 crop in the southern producing states of Sao Paulo, Parana, Mato Grosso, Minas Gerais, and Goias are now reported to be complete. Some cotton had to be replanted in parts of Sao Paulo due to dry weather.

PAKISTAN: COTTON ARRIVALS AT GINS CONFIRM NEAR-RECORD CROP FOR 1986/87

As of November 1, cotton arrivals at gins were reported to be about 15 percent above last season due to a bumper harvest in the major producing province of Punjab, while in the Sind province, seed cotton arrivals at ginneries were reported down 17 percent from a year ago. Several cotton growing areas had been damaged by flooding and higher than usual levels of insect infestation. These two provinces produce most Pakistani cotton.

JAPAN: RICE PRODUCTION POLICIES UNDER REVIEW

Japan's Agriculture, Forestry and Fisheries Ministry is reviewing the country's rice policies. The review addresses problems of overproduction, high production costs, and burgeoning stocks. Solutions already under consideration include reducing production costs 30-50 percent by 1990, allowing farmers to grow feed-use rice, and cutting rice subsidies by 6 percent to 205 billion yen in 1987/88. Cost reductions hinge on consolidating the nation's 500,000 small rice farmers into "nucleus farm households" for efficiency and improved economies of scale. Shifting area out of rice production will be increasingly emphasized. The rice diversion program, initiated in 1978 to transfer rice area to wheat, feed grains, and soybeans, may increase its 3-year target area from 600,000 hectares to 770,000. Efforts to reduce rice prices revolve around relaxing the Foodstuff Control Law that substantially differentiates producer and consumer prices. The Agriculture Ministry hopes to allow market forces to exert greater control on rice producer prices which recently have been eight times higher than those in the United States. Rice is the only cereal in which Japan is self-sufficient.

COTE D'IVOIRE (IVORY COAST): PALM OIL PRODUCTION TO INCREASE

Although Cote D'Ivoire is the second largest producer of palm oil in Africa, its industry has grown little in recent years. Yields have declined as trees have aged and some plantations even have been abandoned. To correct this problem, the Palminindustrie (a government corporation) has undertaken a 5-year project (1986-1990) to replace old trees and to expand growing area. The project involves about 65,000 hectares of which one-third will be new plantings. These new trees will be a hybrid cross between the Malaysian Dura and the African Tenera palm varieties and should begin producing in about 3 years. Total area planted to palms is expected to increase from 104,000 hectares in 1985 to 125,000 hectares in 1990.

The Palminindustrie has attempted to reverse the recent decline in production with a 25-percent price increase paid to producers for their fresh fruit bunches. Also, a bonus is being paid for yields of 5 to 7 metric tons per hectare with an additional bonus paid when yields exceed 7 tons per hectare. These incentives encourage farmers to thoroughly harvest their aged trees. Total production in 1986 is estimated at 180,000 tons, up almost 10 percent from 1985. Output in 1987, however, is expected to fall marginally due to dry weather and weak world prices.

ARGENTINA: WHEAT SUPPORT PRICE ANNOUNCED

The Argentine National Grain Board announced the 1986/87 wheat support price early last month, according to the U.S. agricultural counselor in Buenos Aires. The new price is 8 Australes per quintal (one quintal equals 100 kilograms). At the prevailing exchange rate this translates to around US\$64 per ton. Last year's support price was 7.2 Australes per quintal (equivalent to slightly more than US\$72 per ton).

EUROPE: WINTER CROP CONDITIONS

Fall sown crops have entered dormancy across most of Europe. In northern continental Europe, weather conditions for planting and early establishment of the crop were generally favorable. Dry conditions have persisted in a large part of southeastern Europe. Although currently dry, precipitation in northern France and Spain was above normal through most of the planting season. Recent reports from FAS field offices give a more detailed look at conditions in Poland, East Germany, and Yugoslavia.

- o POLAND: The 1986 summer grain harvest was completed earlier than last year, allowing farmers to prepare the soil and plant most of the fall sown crops on time. Area planted to winter wheat is expected to be about the same as last year. Government plans called for the planting of 1.7 million hectares of winter wheat, 2.6 million hectares of winter rye and 150,000-200,000 hectares of winter barley. The highly acclaimed grain, triticale, has reportedly been sown on more than 200,000 hectares, over 3 times that of last year.

- o EAST GERMANY: Winter grain area is expected to be up slightly from last year. Ninety percent of the winter wheat was planted by the beginning of November, earlier than last year and earlier than normal. November temperatures were milder than normal and soil moisture was satisfactory. Emergence and tillering of winter wheat, barley, and rye reportedly benefited from the favorable conditions. The mild fall, however, has not allowed for hardening of the grain crop and could leave it more susceptible to winterkill.
- o YUGOSLAVIA: Dry weather during September and most of October delayed winter wheat sowing. Only a small portion of the planned 1.4 million hectares of wheat was planted during the optimal planting period of October 1-25. Rains during the last part of October improved soil moisture conditions and the Yugoslav Federal Committee for Agriculture reported wheat sowings reached 77 percent of the planned area by November 10. Yugoslav wheat specialists advised farmers to continue sowing wheat throughout November and to increase seed use by 10-15 percent in order to compensate for the late plantings.

World rough (paddy) rice production for 1986/87 is estimated at 466.7 million tons, up 121 million tons or about one-third from that produced in the mid-1970's. The annual average of 1974/75-1976/77 is used as the base period for the following analyses.

MAJOR EXPORTERS

Rice yields in the United States have risen nearly one-quarter in the last 10 years and in 1986/87 are an estimated 6.31 tons per hectare. Area however has declined 11 percent since the mid-1970's and 39 percent from the record 1980/81 crop year. This results in 1986/87 production at a level 11 percent greater than that in the mid-1970's.

Rice production in the major foreign exporting countries of Burma, Thailand, and Pakistan rose 10.5 million tons (rough basis) or 38 percent from the mid-1970's. Yields increased 27 percent in these three countries while area expanded 1.3 million hectares or 7 percent. Production has risen in Thailand by almost a quarter in the past decade. Average yields are, however, still low by world standards at 2 tons per hectare. This is because only about one-third of the area harvested is irrigated and a relatively small fraction of the total rice area is sown to high yielding varieties.

MAJOR IMPORTERS

In the major importing countries (EC-12, Indonesia, Nigeria, and the Republic of Korea) paddy output is forecast up 19 million tons or 57 percent greater than the mid-1970's. Most of the increase can be attributed to expanded area. The volatility of the world rice market has encouraged, where possible, importing nations to adopt self-sufficiency policies that limit imports and promote domestic production with the use of improved varieties; agricultural chemicals, and the extension of credit.

Indonesia was the world's largest importer in the late-1970's, accounting for a fifth of global rice trade. But output has jumped nearly three-quarters in the last 10 years; area has risen an estimated 1.4 million hectares or 17 percent while yields are up 47 percent. As a result, Indonesia is now self-sufficient in rice. Over the long term, limited land availability and a high population growth rate may make self-sufficiency difficult to sustain.

Rice area has expanded dramatically in Nigeria, up 142 percent since the mid-1970's, while yields have increased 9 percent; total output is up 157 percent.

In the EC-12, area is up by one-half, but yields have increased only 10 percent and are estimated to be down 6 percent in 1986/87 compared to last year's record level. Spain and Italy are the major rice producers in the EC.

Paddy output in the Republic of Korea has risen about 1.1 million tons or 17 percent in the past decade. Throughout the 1970's, Korea was a rice deficient country but has moved gradually into a surplus position. Controlling rice prices is emphasized as part of the government policy of containing inflation and stabilizing basic commodity prices. The increase in production is a direct result of the introduction of high-yielding indica-type rice.

OTHER MAJOR PRODUCERS

China's 1986/87 paddy rice production is estimated to be 47 million tons, or 38 percent greater than a decade ago. More than 3.5 million hectares have shifted out of rice cultivation, but yields are up 53 percent. The yield increase is related to decollectivization and a more market-oriented production system linking output to personal remuneration. The recent decline in sown area is due to the low price of rice relative to other crops. Measures are being taken to make grain production more attractive, including providing inexpensive diesel fuel and agricultural chemicals to farmers willing to sign production contracts with local authorities.

Rice dominates the economy of Bangladesh. Over 90 percent of the area sown to cereals is allocated to rice production. Output has increased 29 percent since the mid-1970's due to higher yields. Average yields remain relatively low however. Most rice is rainfed and traditional varieties tend to respond poorly to the small amounts of available fertilizer.

Production has risen 28 percent in Brazil in the past 10 years due mainly to increases in average yield; area is up only 5 percent. Yields still remain low by world standards.

India is the world's second largest rice producer and accounts for about 20 percent of total production. Output has risen 38 percent since the mid-1970's due mostly to improved yields; area is up 6 percent. Almost two-thirds of India's rice area is rainfed and overall yields are among the lowest in the world. The Government of India is presently emphasizing increasing yields in the eastern states of Bihar, Orissa, West Bengal, and Madhya Pradesh, where long duration rice is cultivated and yields are much below the national average.

Vietnam has made significant progress in rice production since the mid-1970's with paddy output rising an estimated 4.7 million tons or 42 percent. Most of the increase is due to higher yields; estimated at about 2.75 metric tons per hectare, up 30 percent in the last 10 years. High yielding varieties are grown on about a third of the sown area. The Government has promoted the dissemination of intensive cultivation techniques and targeted its limited inputs and fuel to the most fertile areas. However, fertilizer availability remains a serious problem.

(More details are available in the Weekly Weather and Crop Bulletin. Subscription information may be obtained by calling (202) 447-7917.)

Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture's** telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture**.

Subscribe today! Just \$11.00 (\$13.75 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE. Mail this form to: Foreign Agricultural Service
Information Division
Room 4644-S

HOW TO SUBSCRIBE

World Crop Production circulars are issued 12 times a year. They are available on a subscription basis for \$18.00 in the United States or \$25.00 mailed to foreign addresses.

To subscribe, send your check, payable to the Foreign Agricultural Service, to: Foreign Agricultural Service, Information Division, Room 4644-S, U.S. Department of Agriculture, Washington, D.C. 20250. Only checks on U.S. banks, cashier's checks or international money orders will be accepted. NO REFUNDS CAN BE MADE.

HOW TO RENEW

You will receive a notification about 60 days before your annual subscription expires. To prevent a lapse in service, promptly return your renewal form and payment. **Inquiries:** If you have a question about your subscription, write to the above address or call (202) 382-9445.
